

# Film Capacitors

**Series/Type:** AC & Pulse Metallized Polypropylene Film Capacitors (PP/MPP Series)

**Series code:** 68

# 68 Ac & Pulse Metallized Polypropylene Film Capacitors (PP/MPP) Box Type

## Part Number Description

## Rated Capacitance

Three-digit (224) indicate rated capacitance in Pico Farad (First two digits indicate value & third digit indicates number of zeroes to be suffixed to first two digits).

For example:

103	= 10 ×	10 <sup>3</sup>	=	10000 pF	=	10 nF	=	0.01 μF
104	= 10 ×	10 <sup>4</sup>	=	100000 pF	=	100 nF	=	0.1 μF
105	= 10 ×	10 <sup>5</sup>	=	1000000 pF	=	1000 nF	=	1 μF
106	= 10 ×	10 <sup>6</sup>	=	10000000 pF	=	10000 nF	=	10 μF

## Capacitance Tolerance

In 3<sup>rd</sup> group of the part number-

F = ±1%, G = ±2%, H = ±2.5%, I = ±3.5%, J = ±5%, K = ±10%, L = ±15%, M = ±20%, N=±40%

## Rated Voltage

In 4th group of the part number, one numeric digit and one letter (Ex.-2A) indicate DC voltage rating while two Numeric digits (Ex.03) indicate AC voltage rating.

## Rated Voltage Codification

For DC Rated Voltage													
A		B		C		D		E		F		G	
1A	10	1B	12.5	1C	16	1D	20	1E	25	1F	30	1G	40
2A	100	2B	125	2C	160	2D	200	2E	250	2F	300	2G	400
3A	1000	3B	1250	3C	1600	3D	2000	3E	2500	3F	3000	3G	4000

## \*Packing Type details:

- 1: Bulk packing (original pitch)
- 2: Bulk packing (after forming & cutting)
- 3: Ammo packing (after forming & taping)
- 4: Bulk packing (after forming in original pitch without cut)
- 5: Bulk packing (after formed & without cut)
- 6: Ammo packing (Straight lead)
- 7: Bulk packing (Straight lead cut)
- 8: Reel packing (Straight lead)

## Reference Data

Capacitance	0.0068 $\mu$ F to 0.47 $\mu$ F
Capacitance Tolerance	$\pm$ 5% to $\pm$ 10%
Rated Voltage	1000 Vdc to 2000 Vdc
Permissible AC voltage at 50Hz/60Hz	400 Vac to 700 Vac
Climatic testing class according to IEC 60068-1	40/100/56
Maximum application temperature	100°C
Rated temperature	85°C
Reference standards	IEC 60384-16
Dielectric	Polypropylene
Electrodes	Metallized
Construction	Series
Encapsulation	Encased in flame retardant box filled with resin
Leads	Tinned wire
Marking example on capacitor body	PP-MPP/D104J3A /LOT NO
Compatibility to RoHS

## Voltage (Vrms) And Current (Irms) VS Frequency Derating Graph

## Specific Data

Description	Value		
Maximum tangent of loss angle(Tan $\delta$ )	Frequency	$C_R \leq 0.1 \mu F$	$0.1 \mu F < C_R \leq 1 \mu F$
	1 kHz	0.0005	0.0008
	10 kHz	0.0010	0.0015
	100 kHz	0.0030	0.0050
Voltage proof test between leads	1.6 times of the rated DC voltage for 2 second		
Insulation Resistance (RIS) (or) time constant $T = C_R \times RIS$ at 25° C, relative humidity $\leq 70\%$	$C_R \leq 0.33 \mu F$ $\geq 100000 M\Omega$	$C_R > 0.33 \mu F$ $\geq 30000 s$	

## Endurance Test

Loaded at 1.25 times of rated voltage at 85°C for 1000 hours.

### After The Test

$\Delta C/C$  :  $\leq 10\%$  of initial value.

Increase of Tan  $\delta$  :  $\leq 0.005$  at 1 kHz

Insulation resistance :  $\geq 50\%$  of the value mentioned in specific data.

## Temperature Derating Graph

For temperature between 85°C and 100°C a derating factor of 1.25% per °C on the rated voltage  $V_R$  has to be applied

only better

## Power Dissipation and Maximum Component Temperature Rise

After applying the A.C voltage to the capacitor with certain frequency, we can measure the hot spot temperature of the capacitor. From that we can calculate  $\Delta T$ .

$$\Delta T = \text{hot spot temperature} - \text{ambient temperature}$$

T1 is the capacitor under test (Connected in the circuit)

T2 is capacitor which has no connection

Distance between T1 and T2 should be about 50mm and 100mm from other components. To avoid radiation or convection, the capacitor should be tested in a wind-free box. The capacitor under test is separated by polystyrene

$$\Delta T_{\max} = T1 - T2$$

at one frequency level the  $\Delta T_{\max}$  reach  $10^{\circ}\text{C}$ . That is the frequency which we have to start frequency derating.

## Storage Conditions

Avoid storing the capacitors in places where the environmental conditions differ from the following:

Storage time:  $\leq 24$  months from the date marked on the label glued to the package.

- Temperature:  $-40$  to  $80^{\circ}\text{C}$
- Humidity:

- Average per year:  $\leq 70\%$
- For 30 full days randomly distributed throughout the year:  $\leq 85\%$
- Dew: absent

After a longer period of storage or use, the tolerance can increase; but, according to standard specification, it may never exceed twice the value measured at the time of delivery.

## Disclaimer

All our capacitors are designed, manufactured and tested to specifications. We strictly adhere to standards in procurement of materials, in the laid down manufacturing processes and consistently apply stringent process controls and testing parameters. This ensures that our capacitors always perform to the offered specifications. Appropriateness of use in a specific circuit and fitness to a particular application however needs to be verified and its reliability through expected lifetime is required to be validated by the customer. Deki's responsibility is limited to ensuring that the capacitor performs as claimed in the specification/ data sheets provided by Deki. Deki specifically disclaims any implied warranties of fitness for any particular purpose. Liability, in any case is limited to the price paid for the capacitors.
